

PRESSURE RELIEF VALVES

For Oil Filled Distribution Transformer

VIAT

INSTRUMENTS

VI-02 (R1)

PRESSURE RELIEF VALVES 301-3 SERIES

Flow Rate : > 35 SCFM at 15 PSIG | Indicator : None | Size : 1/4" NPT/BSP

301-1 Series
1/4" NPT Without accessories

301-3 Series
1/4" NPT With accessories

301-2 Series
1/4" BSP With accessories

FEATURES

- Factory preset pressure for automatic venting and resealing.
- All brass and stainless steel construction.
- Viton 'O' ring for long trouble free service.
- Stainless steel pull ring for manual bleeding.
- Meets or exceeds ANSI and REA standards.
- Rugged design provides trouble free over pressure protection.
- Each unit individually tested for cracking and resealing.

04.	Spring	SS	SS
05.	Guide	SS	SS
06.	Indicator Cap	PVC	PVC
07.	Pull Ring	SS	SS

Construction

The 301 to 303 series pressure relief valves comprise of a single piece brass body housing the complete assembly.

The stainless steel spring is factory selected to the desired rating and compressed to a pre-determined level. One end of the spring is fixed, the other end forces the brass poppet against the body. A Viton "O" ring between the poppet and body ensures leak proof sealing. The valve also features a cap which covers the exhaust port to prevent ingress of insects, dirt or external elements. In indicating models the cap moves along the poppet/ falls down and hangs with a chain thus exposing a red indicator when the valve operates.

A stainless steel pull ring allows for manual operations of the valve.

Installation

The NPT thread has to be prepped with a few layers of teflon tape, sealant to ensure leak proof installation. For 301.2 and 301.3 series, permanent thread seal must be used on the nut.

Operation

The operation of the valve is automatic. When the fluid pressure in the tank exceeds the specified limit, the valve opens and releases the pressure. When pressure falls to safe valve, the valve reseals itself.

Maintenance

Under the standard operating conditions these valves do not require any maintenance.

KRYTOX LUBRICATED FOR TRANSFORMERS USING FR3 OIL

Size : 1/4" NPT Thread

Series- 302.5

Series- 302.6

Series- 302.7

FEATURES

- Every valve individually lubricated with Krytox grease for easy operation and resealing in FR3 oil.
- Indicating and non indicating model.
- All moving parts lubricated with krytox grease.
- Factory preset pressure for automatic venting and resealing.
- All brass and stainless steel construction for use in extreme outdoor conditions.
- Viton "O" ring for long trouble free service.
- Stainless steel pull ring for manual bleeding on all models.
- Device meets or exceeds REA and ANSI standard for distribution transformers.
- Approved and meets all specifications of manufacturer of FR3 oil.

HIGH FLOW PRESSURE RELIEF VALVE

Flow Rate : 200 SCFM At 15 PSIG | Size : 1.25" - 11.5 NPT

310 Series

FEATURES

- All forged brass, stainless steel components for use in extreme outdoor conditions.
- Viton 'O' Ring for long trouble free service.
- Operating pressure standard range available 5.8 psi and 10 psi.
- Flow rate upto 200 scfm @ 15 psig.
- 100% valve tested for operating pressure and resealing.
- Operating pressure options from 2 to 10 psi for special application.

311 Series

Construction

The Pressure Relief Valve consists of a Extruded Brass body suitable for 1.25"-11.5 NPT thread mounting on the transformer tank. The valve shutter is spring loaded using shaft and lock nuts and seals against the body with Viton "O" Ring.

Working Principle

When pressure in the tank rises beyond the preset limit, the shutter moves up with the "O" Ring, thus releasing the excess pressure. When the pressure falls to allowable values, the spring forces the shutter back to its position.

PRESSURE RELIEF VALVES

Size: G1" & G2" to ISO 228 (BSP Thread)

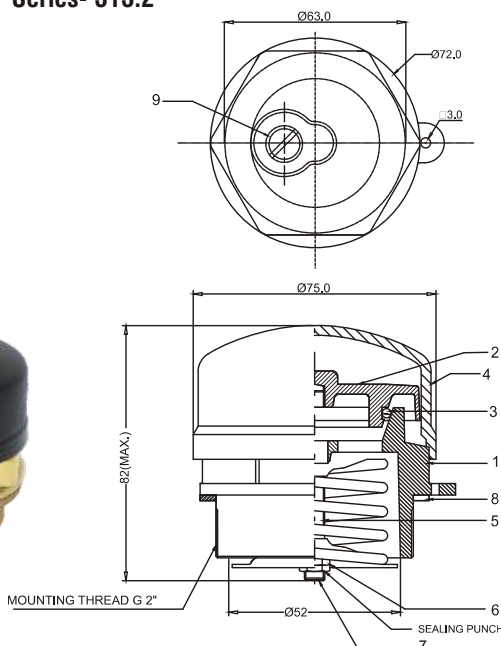

Series- 308.1

Series- 309.1

Series- 313.2

FEATURES

- All forged brass, stainless steel components for use in extreme outdoor conditions.
- Viton 'O' Ring for long trouble free service.
- Operating pressure range available from 20 Kpa to 70 Kpa (0.2 to 0.7 bar)
- Thread size G1" & G2" to ISO 228.
- Valve supplied with mounting gasket.
- 100% valve tested for operating pressure.
- Additional protection cap to prevent ingress of dust, insects.

Specifications

PART NO.	DESCRIPTION	MATERIAL
01.	Body	Brass
02.	Shutter	Brass
03.	'O' Ring	Viton
04.	Protective Cap	Polypropylene
05.	Spring	Stainless Steel
06.	Lock Nut	Stainless Steel
07.	Tie Rod	Stainless Steel
08.	Mounting Gasket	NBR / Cork
09.	Bleed Screw (Optional)	Brass

Construction

The Pressure Relief Valve consists of a forged body suitable for thread mounting on the transformer tank. The shutter is spring loaded using tie rod and lock nuts and seals against the body with Viton "O" Ring. The Protective Cap prevents ingress of insects, dust. All Pressure Relief Valves are supplied with NBR/Cork Gasket.

Working Principle

When pressure in the tank rises beyond the permissible limit, the shutter moves up with the "O" ring, thus releasing the excess pressure. When the pressure falls to allowable values, the spring forces the shutter back to its position. The Pressure Relief Valves are available from operating pressure of 20kpa (0.2 bar) to 70kpa (0.7 bar). Non standard pressure setting can also be provided on request.

PRESSURE RELIEF VALVE (Economy Model In Aluminium Body)

Size: 3/4", 1" & 2" Thread

Series- 308.5

Series- 313.1

Series- 314

FEATURES

- Replaces the obsolete explosion vent in conservator type transformer.
- Automatic venting & resealing.
- Maintenance free.
- More cost efficient than explosion vent.
- Each valve tested for operating pressure and resealing pressure.
- Ideal for transformers from 5Kva to 1000Kva, conservator type, or hermetically sealed.

Pressure Setting

The operating pressure of the PRV should be set below the safe pressure of the tank. For hermetically sealed transformers the pressure setting may vary from 0.20 bar (20Kpa) to 0.35 bar (35Kpa). For transformers with conservator, the operating pressure may vary from 0.40 bar (40Kpa) to 0.70 bar (70Kpa).

Size:

There are no international standards for linking the size of PRV with the transformer tank size or rating. A broad based recommendation from us would be as follows :
 | upto 100 Kva - 3/4" size | upto 500 Kva - 1" size | upto 1000 Kva - 2" size

These recommendations are only indicative and transformer manufacturers may follow their own technical requirements based on design and customer requirement.
